### Editors Speak: Journal of Radiology Nursing

**Kathleen Gross**

The *Journal of Radiology Nursing (JRN)* is the official peer-reviewed journal of the Association for Radiologic and Imaging Nursing (ARIN, formerly the American Radiological Nurses Association). While *JRN's* primary focus is to meet the educational needs of radiology and imaging nurses, other nurses and healthcare providers will find the articles about imaging tests and therapeutic imaging interventions enlightening and clinically useful. Imaging patients range from the prenatal patient to the forensic patient as they enter the many imaging modalities. Perhaps, this patient age span and modality range are two reasons *JRN* is so unique. The specialty of radiology nursing is changing constantly as new technologies emerge often giving rise to new diagnostic tests and therapeutic procedures. Radiology and imaging nurses pioneer nursing guidelines and procedures for these new tests and interventions while being part of the greater imaging team.

*JRN* is published quarterly by Elsevier. The journal home page can be found at

[http://www.elsevier.com/wps/find/journaldescription.cws\\_home/701731/description#description](http://www.elsevier.com/wps/find/journaldescription.cws_home/701731/description#description).

*JRN* is an ARIN member benefit; individual and institutional subscriptions are also available. *JRN* is proud of its growing international circulation. Current circulation is approximately 2,100. *JRN* is available on-line for easy access. *JRN* is listed in Mosby's Nursing Consult and the Cumulative Index to Nursing & Allied Health Literature (CINAHL). The journal is a member of the Committee on Publication Ethics (COPE). As editor, my goal is include a diversity of manuscript topics in each journal issue. Each manuscript is eligible for the annual Linda Strangio Editor's Award.

*JRN* publishes original research, case studies, review articles, letters to the editor, book reviews, special columns and nursing essays. Manuscripts on professional issues are always welcome as they compliment the radiology focused manuscripts. Past authors have included radiology nurses, physicians, physicists, radiology technologists, anesthesiologists and pharmacists who are all part of healthcare team in radiology and imaging areas. A "Call for Manuscripts" appears in the front of each issue. The editor welcomes query letters. The editor and editorial board members are very willing to mentor a new author. The time a manuscript is in peer review is often relative to the experience of the author. Every effort is made to publish new information in a timely manner so practice can be influenced by new evidence. The journal accepts about 85% of articles and many are invited. Manuscripts are usually published within a year of acceptance. The author guidelines and information on how to submit a manuscript can be found at [www.radiologynursing.org](http://www.radiologynursing.org) and [www.ees.elsevier.com/jrn](http://www.ees.elsevier.com/jrn). The Elsevier Editorial System (EES) allows the editor to communicate efficiently with authors and reviewers.

The distinguishing feature of the most sought after articles is that they offer some practical information for the clinician. *JRN* is the type of journal nurses like to keep readily available as a resource.

Manuscripts for *JRN* need to have merit and be professionally written. These are not weekend projects. It is disheartening to the editor to receive a poorly written manuscript or one that does not comply with the author guidelines. Authors who want to make a good first impression should always recheck the author guidelines before submitting a manuscript. Authors who submit manuscripts on recently published topics may be disappointed to have their manuscript rejected.
